

This architectural elevation drawing shows the side profile of a building. The structure features a gabled roof with a visible truss system. The facade is composed of a main section with a series of windows and a smaller section on the left. The windows are arranged in two rows: the upper row has eight windows, each divided into six panes (3x2), and the lower row has seven windows, each divided into four panes (2x2). The building's base is marked with a dashed line indicating the ground level. Various dimensions are provided throughout the drawing, including vertical measurements for window heights and overall building height, and horizontal measurements for window widths and spacing. A small section on the left shows a staircase and a smaller window unit. The drawing is a technical representation, likely for construction purposes, showing the building's form and proportions.
